

Clear thinking delivering automation excellence

Understanding that today's manufacturers face significant risk and investment just to maintain profitability, Vaalto has been investing heavily in a structured development program that delivers commercial and manufacturing integrity. Giving your processes the competitive edge.

Vaalto Technologies has developed a simple, easy to follow approach to your automation project .

Recognising that clear thinking, insight and perfect execution are the building blocks of any successful automation project, Vaalto has created the '5 Easy Steps' approach.

What are the benefits to you?

As a client you would have clear point of entry in to the project, the '5 Easy Steps' provide a formula, orientation and resolution that enables you to closely track and monitor your projects progress.

Think of Vaalto as a safe pair of hands in a industry buffered by constant change and increasing commercial pressure.

Project Evaluation

Given the ever expanding selection of technologies available, the choice of the most appropriate hardware, software or database has become increasingly difficult to assess for end users.

Vaalto Technologies uses its experience and knowledge in the automation sector to give its customers an honest and unbiased view point.

Vaalto Technologies believe that an in-depth understanding at the beginning of the project is vital to a smooth delivery. We balance conceptual design with budget and practicality, to delivery most appropriate design and philosophy for the process.

Specifications play a key role in documenting your requirements. Vaalto believe in detailed design documentation and is skilled in the production of User Requirement Specifications (URS), Function Design Specifications (FDS) and Software Design Specifications (SDS).

Vaalto Technologies has extensive experience in systems design and integration using Industry standard PLC platforms for all types of plant controllers, including PLC's, Soft Controllers and Distributed Control Systems (DCS).

By adopting a modular approach to application code, Vaalto ensure that it is well documented, simple to understand and easy to maintain and modify.

Vaalto Technologies commissioning engineers have accumulated many years of experience across diverse applications. Carefully planning all its activities around your production schedules to minimise disruption.

Vaalto prides itself on its after sales support and offers a number of support programmes that can be adapted to meet the your specific requirements.

Training programmes are tailored to match your needs and are designed to ensure you are fully versed in the operation and philosophy of a new system well before it arrives on site.

Vaalto regularly holds training courses covering more general topics related to the application and configuration of proprietary systems.
